

# Installing GDAL Tools

## Installing GDAL Tools

Follow these instructions to install GDAL Tools on Ubuntu.

*Note: This was tested on Ubuntu 12.04.1 LTS.*

### Requirements:

- This assumes you have installed [Spatialite](#)

### Instructions:

- download and compile [gdal \(1.10.0\)](#)

```
wget http://download.osgeo.org/gdal/1.10.0/gdal-1.10.0.tar.gz
tar xzf gdal-1.10.0.tar.gz
cd gdal-1.10.0
./configure
make
sudo make install
cd ..
```

You probably also want to use `ldconfig` to make sure `/usr/local/lib` is included when Ubuntu looks for shared libraries.
